Zapalovací svíčky BRISK pro motorové pily a motory malé zemědělské mechanizace

Zapalovací svíčky označené počátečními písmeny P, U, J, K, S, T v systému značení BRISK jsou speciálně konstruované pro použití v motorových pilách, motorech křovinořezů, travních sekaček a stacionárních pohonných jednotek.

Vyznačují se spolehlivou funkcí jak při volnoběhu, tak i při maximálním výkonu, což je charakteristický druh provozu pro motorové pily. Nezanášejí se úsadami hoření a nezpůsobují samozápaly a následně vylétání žhavých jisker z výfuku. Speciální konstrukce zajišťuje nízkou váhu a odolnost proti vibracím.

BRISK spark plugs for power saws and motor of small agricultural machines

Spark plugs identified with initial letters P, U, J, K, S, T in the Brisk marking system are specially designed for applications in chain saws, brush cutters, lawnmowers and stationary drive units.

They provide reliable function at idle speed as well as at maximum output, which is a characteristic operating mode chain saws. They do not get logged with combustion-related deposits and do not cause self-ignition and subsequent release of hot sparks from the exhaust pipe. Thanks to their special design, they have a low and are resistant to vibrations.

Свечи зажигания «BRISK» для бензопил и двигателей мелкой сельхозтехники

Свечи зажигания «BRISK» обозначение буквами P, U, J, K, S, T - это изделия специально созданные для двигателей бензопил, кусторезов, сенокосилок и т.п.

Отличаются надежностью как на стадии холостого хода, так и при максимальной нагрузке, что прежде всего требуется для бензопил. Свечи не загрязняются нагаром, препятствуют самовоспламенению горючего и искробразованию выхлодов. Специальными мероприятиями достигнуто масляного веса и вибростойкости.

Technické požadavky na zapalovací svíčky

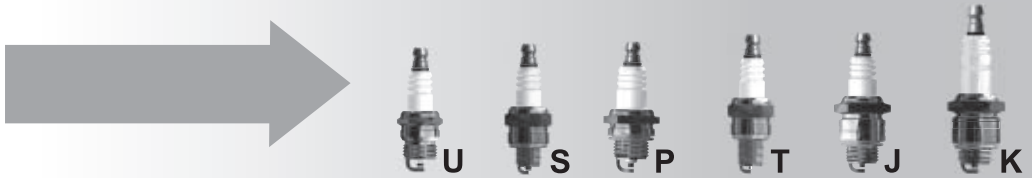

Rozměry – odpovídají mezinárodním rozměrovým normám

Technical requirements for the spark plugs

Dimensions – comply with international dimensional standards

Технические требования к свечам зажигания

Габариты соответствуют международным стандартам

Oduřovací schopnost

Využívání motorových pil, travních sekaček a jiné malé mechanizace v hustší městské zástavbě vyvolalo nutnost zamezit rušivému vyzařování elektromagnetických vln těchto zařízení.

Plnění přísných legislativních předpisů je řešeno použitím oduřených zapalovacích svíček s ohmickou hodnotou 10 k Ω .

Interference suppresion feature

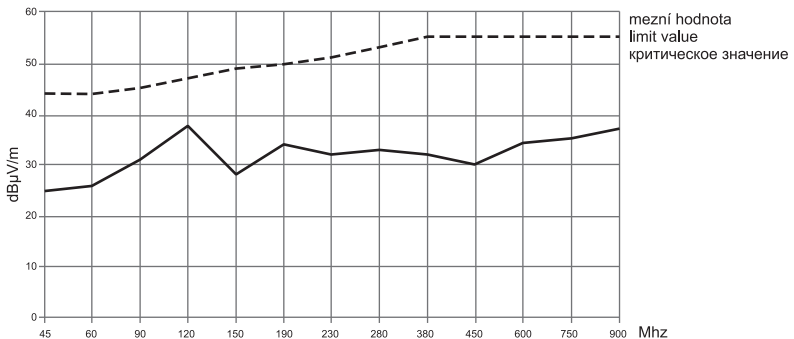

The use of chain saws, lawnmowers and other small machines in high-density urban development has led to the need of suppresion of radiation of electromagnetic waves of these devices.

The most stringent regulatory requirements are met by the use of RFI-suppressed spark plugs with resistance value of 10 k Ω .

Способность сопротивлять помехам

Использование бензопил, сенокосилок и дпругой механизации в населенных пунктах вызвало жесткое требование устранить возникающие при их эксплуатации электромагнитное излучение.

Решением является применение свечей зажигания с резистором с омическим сопортивлением 10 k Ω .

Odolnost proti vibracím

Provoz maloobjemových jak dvoutaktních, tak i čtyřtaktních motorů v různých aplikacích vyžaduje vysokou odolnost zapalovacích svíček proti vibračnímu namáhání.

Řešeno:

- krátkou délkou zapal.svíček
- konstrukční úpravy (ukotvení svorníku v izolátoru)
- mechanickým zajištěním kabelové matice ISO (nebo integrovaný svorník)

Vibration resistance

Operation of small-capacity both two-stroke and four-stroke engines in various applications requires high vibration resistance of the spark plugs.

This is solved by:

- short length of the spark plugs
- spark plug design (anchoring of the pin in the insulator)
- mechanical fixation of ISO cable nut (nebo integrovaný svorník)

Вибрационная стойкость

Эксплуатация двигателей малого объема создает необходимость защищать свечи зажигания от вибрационных нагрузок.

Решение:

- малая длина свечи
- конструктивные мероприятия (соединение контактной головки в изоляторе)
- укрепление контактной гайки

Životnost

Zabezpečení bezvadné funkce ve všech provozních režimech, plnění přísných emisních limitů a spolehlivé starty zajišťují zapalovací svíčky BRISK řady GARDEN svou širokozahovostí.

Systematickou kontrolou tepelné hodnoty zapalovacích

svíček na speciálním zařízení (měrném motoru), dlouhodobými zkouškami ve zkušebně BRISKu i u odběratelů a zejména správnou volbou, tj. přiřazením typu zapal.svíčky k danému motoru je dosahováno životnosti požadované výrobcí motorů a jejich uživatelů (300 hod.).

Service life

Thanks to its wide range the BRISK spark plugs of GARDEN line provide perfect function in all operating modes, fulfilment of the most stringent emission limits and reliable starting.

Long service life (300 hours) as required by the manufactures and users of engines is reached thanks to

the systematic check of the spark plug heat range on a special equipment (measuring motor), long-run tests in both BRISK testing laboratory and at the clients, and above all by correct selection i.e. assignment of the spark plug type to a specific motor.

Долговечность

Проверкой калильного числа на специальном стенде, продолжительными испытаниями в лаборатории фирмы «BRISK» и у покупателей а прежде всего правильным

подбором свечи для конкретного двигателя достигается срока службы, который требуют изготовители двигателей и потребители (300 часов)

Technologie výroby zapalovací svíčky

Přesto, že se zapalovací svíčka skládá pouze se sedmi až devíti základních částí, je sériová výroba velmi náročná a vyžaduje speciální technologické zařízení vyvinuté předními světovými firmami.

Pro výrobu zapalovacích svíček používá BRISK Tábor a.s. nejvyšší kvalitu materiálů dodávané specializovanými firmami.

Použití nejvyšších materiálů, vyspělé technologie výroby, certifikace systému řízení jakosti podle norem ISO/TS 16949, ISO 14001 a vlastní vývojové centrum s vybavenými laboratořemi a zkušebnami – to jsou základy pro produkci zapalovacích svíček, splňující nejvyšší požadavky výrobců motorů.

Spark plug manufacturing technology

Although the spark plug consists only seven to nine basic parts, its series production is complex and requires special manufacturing equipment developed by leading world companies.

BRISK uses high quality materials supplied by specialized firms for the spark plug production.

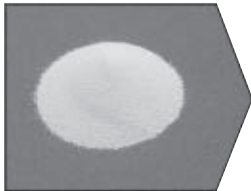

The use of high quality materials, advanced technologies, quality system certified according to ISO/TS 16949, ISO 14001 and own development centre with laboratories and test rooms – these are the bases for spark plug production meeting the most demanding requirements of engine manufacturers.

Технология изготовления свечей

Не смотря на то, что свеча состоит только из 7-9 составных частей, серийное производство очень сложно и требует технологическое оборудование созданное передовыми мировыми фирмами.

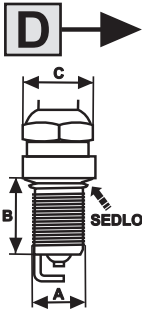

Для изготовления свечей зажигания «BRISK» применяются самые качественные материалы поставляемые специализированными фирмами.

Применение самых качественных материалов, передовая технология, сертификация системы управления качеством в соответствии с ISO/TS 16949 и ISO 14001 и соответственный НИ центр со своими оборудованным лабораториями - это предпосылки для выпуска свечей выполняющих все требования изготовителей двигателей.

Proper installation of spark plugs

Správná montáž zapalovacích svíček

Правильный способ установки свечей зажигания

Before installation make you always sure that you use the proper type of the spark plug for particular engine.

Před montáží zkontrolujte, zda používáte správný typ zapalovací svíčky do daného typu motoru.

Прежде чем установить свечу зажигания, всегда убедитесь в том, что тип свечи подходит для данного типа двигателя.

Check out before installation whether the spark plug is provided with external gasket and whether the external gasket did not stay in the cylinder head from the preceding spark plug after repeated installation (this is not valid for taper seat spark plug).

Před montáží zkontrolujte, zda je zapalovací svíčka opatřena těsnící podložkou a zda v hlavě válce při opětovné montáži nezůstala těsnící podložka z předchozí zapal. svíčky (neplatí pro svíčky těsněné kuželem).

Перед началом работы необходимо проверить, имеет ли свеча зажигания уплотнительную шайбу и не осталась ли в отверстии головки цилиндра уплотнительная шайба предыдущей свечи (это не относится к свечам с конической посадкой).

Tightening torque must be within tolerancies gives in the table above.

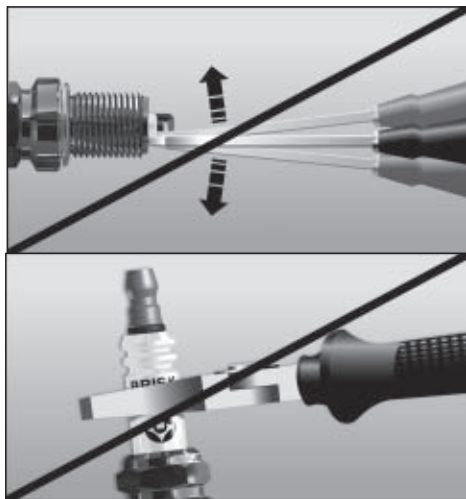

Utahovací moment musí být v tolerancích daných výše uvedenou tabulkou.

Усилие затяжки не должно превышать значение, указанное в таблице.

At spark plug installation into and removing from cylinder head it is not allowed to apply force on the insulator.

Při montáži a demontáži zapalovací svíčky do hlavy válce nesmí být působeno na izolátor silou.

В ходе снятия старой и установки новой свечи в головку цилиндра не прикладывать усилие на керамический изолятор свечи.

Use always the proper spark plug wrench which is not too loose and is provided with centring ring from soft material.

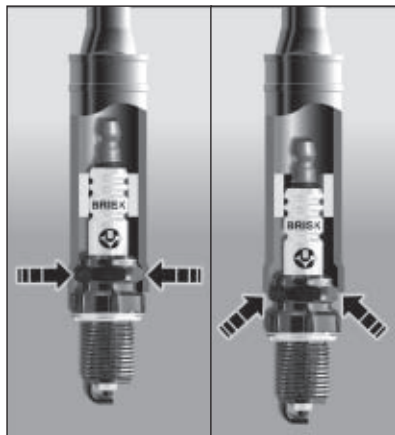

Používejte vždy správný klíč na svíčky, který není příliš volný a je opatřen středícím mezikroužkem z měkkého materiálu.

Всегда применяйте подходящий ключ для свечей, который не слишком большой и имеет промежуточное центрирующее кольцо из мягкого материала.

Tightening torque must be applied perpendicular to the spark plug axis.

Utahovací moment musí působit kolmo na osu zapalovací svíčky.

Усилие затяжки следует прикладывать перпендикулярно к оси свечи зажигания.

Tightening torque can be applied in such case only when the wrench is put on across the whole length of hexagon of spark plug metall shell.

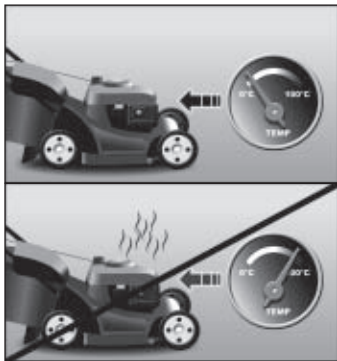

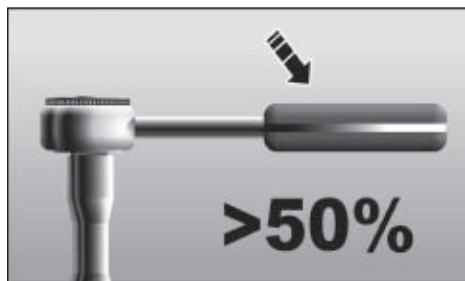

Utahovacím momentem lze působit jen v případě, že klíč je nasazen přes celou délku šestihranu pouzdra svíčky.

Свечу можно затянуть только тогда, если ключ правильно установлен на шестиграннике со всех сторон.

As long as at the installation of spark plug it comes to tightening torque overrun by 50% than the spark plug is not allowed to use any more.

Pokud dojde při demontáži zapalovací svíčky z motoru k překročení utahovacího momentu o 50%, nesmí být zapalovací svíčka dále použita.

Если в ходе снятия свечи зажигания с двигателя было превышено усилие затяжки на более чем 50%, дальнейшее употребление такой свечи не разрешается.

Spark plug installation and removing from the cylinder head must be carried out only when the engine has ambient temperature. Removing and installing spark plug while hot can actually cause thread and cylinder head damage.

Montáž a demontáž provádějte v době, kdy hlava válce má teplotu okolí. Při demontáži nebo montáži do horké hlavy válců může dojít k poškození hlavy válců nebo zapalovací svíčky.

Снятие и установку новой свечи на двигатель следует выполнять после охлаждения головки цилиндров до температуры окружающей среды. Снятие и установка свечи в горячую головку цилиндров может повредить головку или свечу зажигания.

After spark plug installation check out whether the cable boot are proper fixed to the spark plug.

Po montáži překontrolujeme, zda jsou kabelové koncovky dokonale zafixovány k zapalovací svíčce.

После окончания работы следует проверить прочное закрепление наконечника кабеля на свече зажигания.

Spark plugs do not require any maintenance during the replacement interval. Certain level of maintenance is, however, required by the vehicle whose part the spark plugs are. All deficiencies caused by an insufficient vehicle maintenance can be reflected on the spark plug. That is why we recommend, within the framework of prevention, to check the spark plugs at least once a year. Their appearance reflects technical conditions of your vehicle.

Spark plugs replacement intervals are specified for a maximum mileage performance of the engine in a good technical condition. Therefore never exceed the replacement intervals prescribed for a given type of spark plugs! Possible spark plug replacement before the interval prescribed will not cause any problem.

Zapalovací svíčky v průběhu intervalu výměny nevyžadují žádnou údržbu. Údržbu však vyžaduje vozidlo, jehož součástí zapalovací svíčky jsou. Na zapalovací svíčce se promítají všechny nedostatky, které jsou způsobeny nedostatečnou údržbou vozidla. Proto doporučujeme v rámci prevence překontrolovat alespoň jedenkrát ročně zapalovací svíčky. Jejich vzhled vypovídá o technickém stavu vozidla.

Intervaly výměny zapalovacích svíček jsou stanoveny pro maximální kilometrový průběh motoru v dobrém technickém stavu. Proto předepsané intervaly výměny pro daný typ zapalovacích svíček nepřekračujte! Výměna zapalovacích svíček před stanoveným intervalem není na závadu.

Свечи зажигания в течение интервала между заменами не требуют никакого технического обслуживания. Однако техническое обслуживание необходимо для транспортного средства, составными частями которого свечи зажигания являются. На свече зажигания проявляются все недостатки, которые появляются из-за недостаточного технического обслуживания транспортного средства. Поэтому в рамках предупреждения таковых рекомендуется хотя бы один раз в год проверить свечи зажигания. Их вид говорит о техническом состоянии вашего транспортного средства.

Интервалы замены свечей зажигания определены для максимального километрового пробега мотора в хорошем техническом состоянии. Поэтому не превышайте предписанные интервалы замены для данного типа свечей зажигания! Замена свечей зажигания до установленного истечения интервала не наносит вреда.

Procedure to modify the electrode spacing of BRISK spark plugs

Using screwdriver (this operation requires a certain skill). Insert the screwdriver between external and central electrode in the axle of external electrode the way the screwdriver touched only external electrode. Lever the external electrode by several tenths of millimetre over the back of thumb.

Pomocí šroubováku (tato operace vyžaduje určitou zručnost). Šroubovák vložíme mezi vnější a střední elektrodu v ose vnější elektrody tak, aby se šroubovák dotýkal pouze vnější elektrody. Přes hřbet palce povelíme vnější elektrodu o několik desetin milimetru.

При помощи отвертки (данная операция требует определенного опыта). Вставьте отвертку между боковой и центральной электроды по оси бокового электрода таким образом, чтобы отвертка касалась только бокового электрода. Опираясь на большой палец руки, отогните боковой электрод на несколько десятых миллиметра.

WARNING !!!

This cross reference table is informative only.

Due to differences in design and materials the spark plugs of various manufacturers do not have exactly the same heat range.

See the recommendations in application tables of this catalogue to select a right spark plug.

UPOZORNĚNÍ !!!

Tato srovnávací tabulka je pouze informativní.

Zapalovací svíčky od různých výrobců nemají z důvodu rozdílné konstrukce a použitým materiálům zcela srovnatelné hodnoty.

Pro správný výběr zapalovací svíčky je třeba se řídit doporučeními v aplikačních tabulkách tohoto katalogu.

ВНИМАНИЕ !!!

Эта сравнительная таблица только информационная.

Свечи зажигания различных изготовителей не имеют идентичные калильные числа из-за разной конструкции и применяемым материалам.

Для правильного выбора свечи зажигания необходимо руководствоваться рекомендациями в таблицах этого каталога.
